

STEAM AIR MAKE-UP

Axial Flow and Centrifugal

Controls

Control Option MA

NEMA 4 enclosure with disconnect switch, motor starter, transformer, relay, terminal strip, low limit thermostat, shutter motor end switch mounted and wired with connection points for additional controls as may be furnished by others.

Control Option MB (to be used with MA)

Temperature controller, modulating valve-motor-linkage, remote operating station for field mounting and interconnection.

Outlet Temperature Control (OTC)

The OTC system is designed to provide a constant average temperature at the discharge of the air make-up unit. The temperature setting is manually adjust-

able from the operating control station, which is usually mounted at floor level. This station contains the "on-off" control, indicator lamp, and the temperature setting control. The discharge temperature is regulated and maintained by a motor-driven modulating valve. The motor is actuated by electronic sensing devices and an amplifier system, and the valve regulates the flow of steam into the coil.

The electronic modulating system is the best available. It is extremely stable and has no tendency to override on start-up. It will quickly bring the modulating valve to a position of equilibrium and accurately maintain the balance between heat load demand and steam flow.

Remote Operating Station with outlet temperature control (OTC) selector, on-off switch, and indicator lamp at floor level

Standardized control panel — NEMA 4

Steam Distributing Tube Coil

Supply and return connections are at the same end. This allows free expansion of the core without transmitting stresses to the tubes, casing, or tube header joints. This design provide good temperature distribution and a maximum of freeze protection. The outer tube is $\frac{5}{8}$ " in diameter and the inner tube is die-formed to be self-centering with steam jets designed to propel the condensate toward the return header.

In operation, the steam enters the supply section at the center of the header marked "A". It passes to the inner distributing tubes and issues evenly from jets throughout the tube length. The condensate is formed in the outer tube and runs down into the upper half of the header and then to the return line connection at "B". Coupling "C" is for the vacuum breaker.

Accessories

Inlet Hood

With turning vanes as shown or fewer turning vanes for use with vee bank filter section. Available for all units.

Filter Section

There are three types available: vee bank, Roll-O-Matic, or flat-bank design. The standard filter is a disposable type with washable available as an option.

Vee bank filter section

Air Distributor

Features four directional discharge grilles.

Air distributor

Inlet or Discharge Elbows With Turning Vanes

Inlet elbows for use with propeller units. Discharge elbows fit the propeller units and are adaptable to others.

Directional Discharge Grille

Provides for four-way adjustment of airflow. Cabinet is lined with acoustic material. It is usually used with propeller type units.

Vibration Eliminators

Available for use with all type units. Rubber-in-shear or spring.

Bird Screen

Available for use on all type units.

Service Platform

For convenient access to motor and control enclosure, a sturdily-built service platform is optional for all installations.

Additional Options

The following is a condensed list of additional options. Please contact your Aerovent representative with specific requirements not shown.

- Water or electric heating coil in lieu of steam
- Face and bypass configuration
- Integral face and bypass coil
- Chilled water or DX cooling section
- Process heating applications
- Recirculation mixing box
- High efficiency filtration
- Evaporative air cooler section
- Internal fan vibration isolation
- Galvanized, aluminum or stainless steel construction
- Special paints/coatings
- Double wall insulated construction
- Vertical mounting configuration
- PLC controls
- Variable frequency drive or 2-speed operation
- Custom unit design or controls to meet customer needs

Performance Data — Propeller Fan

Unit includes fan, coil, vacuum breaker and motorized shutter — assembled.

Discharge grille is optional (see page 3).

For control options, see page 2.

Propeller Fan

Dimensions are not to be used for construction.

NOTES:

1. Welded construction with internal reinforcing.
2. Liquid-tight conduit.
3. Opening located on shaft centerline for shaft and wheel removal.
4. Discharge position: \triangle Front \triangle Top \triangle Bottom
5. For isolator mounting dimensions, see DWG. R25735-00.
6. Birdscreen is optional.
7. 20x20 NEMA 4 control enclosure when MA package is purchased.
